

JalalAI — Final Structure Decision

Architecture baseline and immediate actions

1. Finalized Decision

JalalAI v1.9.18 Production Foundation is the final canonical structure.

The Replit UI/source will not be merged into this structure. The architecture will not be repeatedly rewritten or restructured. Future development will proceed incrementally on this baseline.

2. What Is Locked

Decision	Status
JalalAI v1.9.18 Production Foundation	FINAL BASELINE
Replit UI/source merge	STOPPED
Repeated architecture rewrites	STOPPED
Unnecessary restructuring	STOPPED
Future development	INCREMENTAL UPGRADES

3. Immediate Actions

1. Treat v1.9.18 as the canonical JalalAI engineering baseline.
2. Preserve the existing architecture and documentation unless a concrete engineering requirement justifies a change.
3. Focus future work on implementation and hardening inside this structure rather than starting another rewrite.
4. Wire and validate the production infrastructure currently defined as foundation work.
5. Complete testing, security hardening, deployment, and monitoring before using a production-ready label.

4. Important Engineering Distinction

Final structure does not mean production-ready implementation. The v1.9.18 package contains foundation artifacts, but PostgreSQL and Redis still need to be fully wired into the application. Object storage, isolated workers, production-grade persistence, and related hardening also remain implementation work.

5. Working Principle Going Forward

No more architecture churn. Build, test, measure, and harden the finalized structure. Any future change should have a concrete technical reason, be tested, and preserve backward compatibility where practical.

Status: FINALIZED BASELINE
